Method for producing alkoxy-substituted phthalocyanins

Abstract

The invention relates to a process for preparing alkoxy-substituted, metal-containing phthalocyanines of the formula (I)

where

- R is substituted or unsubstituted alkyl or cycloalkyl,
- M is a divalent metal atom, metaloxy or a trivalent or tetravalent substituted metal atom,

characterized in that the phthalonitrile of the formula (II)

is reacted in the presence of a metal salt and a base in a water-miscible solvent.
